

METAL SHEET ENCLOSURE

Rade Koncar-TEP

■ METEL SHEET BOXES Type - RK inox

STAINLESS STEEL cabinets are intended for use in industry where anticorrosive materials are required. These products are ideal for food/beverage and pharmaceutical applications or any environment where sanitation concerns require frequent wash downs.

Rade Koncar TEP is a producer of stainless steel cabinets with wide range of dimensions, stainless steel terminal boxes and control desks. The full line of stainless steel products can also be modified to suit individual requirements.

Generally 2 grades of stainless steel are available depending on the application and environment where the enclosures are to be placed.

-Grade 304 is the most common and is suitable for environments such as food processing or in general wet areas where a degree of corrosion resistance is required.

-Grade 316 material has a higher content of nickel and is generally used for highly corrosive environments such as offshore or petrochemical plants.

Both materials are available in mirror or satin finish, with or without a PVC covering to protect the material during handling. On the request of the customer the stainless steel cabinets can be equipped with electricity.
